Piezoresistive pressure transducer

Model 8511A -5K, -10K, -20K

Key features

- 5000, 10 000, 20 000 psig ranges
- Rugged
- High sensitivity
- Temperature compensated

Description

Model 8511A is a rugged, piezoresistive pressure transducer for high pressures. It has a 3/8-inch mounting thread and is available in ranges from 5000 to 20 000 psig.

Endevco pressure transducers feature an active four-arm strain gage bridge diffused into a sculptured silicon diaphragm for maximum sensitivity and wideband frequency response. Self-contained hybrid temperature compensation provides stable performance over the wide temperature range of 0°F to 200°F (-18°C to +93°C). Endevco transducers also feature excellent linearity, high shock resistance, and high stability during temperature transients.

8511A is widely used for high pressure applications such as studies of structural loading by shock waves resulting from explosive blasts, pulsations in hydraulic and combustion systems. For harsh environments where there is particle impingement, an optional version is available with a protective screen and a black silicone grease coating which further reduces photoflash sensitivity and provides an effective thermal barrier for short duration high temperature service.

Piezoresistive pressure transducer Model 8511A -5K, -10K, -20K

Accessories

Product	Description	8511A
22688	Copper gasket (-5K, -10K)	Included
22686	Washer, high pressure (-20k)	Included

Options

Options	Description
M1	"Star" screen and black grease
M5	Metric thread
M8	"B" screen and black grease
M37	Integral connector, no vent tube,hole on side

Notes

- 1. Overrange is limited to 40,000 psi for the 8511A-20K
- 2. Warm-up time is defined as elapsed time from excitation voltage "turn on" until the transducer output is the $\pm 1\%$ of reading accuracy.
- 3. Model number definition:
